Faith Wachukwu

Documentation Engineer

faithwachukwu.com | faithkovi@gmail.com | linkedin.com/in/faith-wachukwu | https://github.com/FaithKovi

SUMMARY

Documentation Engineer with 5+ years of experience across technical documentation, DevOps, and cloud infrastructure. Skilled in creating developer guides, API documentation, docs-as-code, and open-source contributions, including Helm. Reduced support tickets by 80% through improved documentation and currently building AI-augmented workflows using RAG and LLM evaluation.

SKILLS

Documentation Engineering: Docs-as-Code, Docusaurus, Hugo, GitBook, Mintlify, Static Site Pipelines, Vale, markdownlint, lychee, Documentation CI/CD (GitHub Actions), Information Architecture, Diátaxis Framework

Technical Writing: API Documentation (OpenAPI/Swagger), SDK References, Developer Guides, Tutorials, Runbooks, Release Notes, Technical Editing, Developer Experience (DX), Google & Microsoft Style Guides, Accessibility (WCAG)

AI & Documentation Systems: RAG Pipelines, LLM Eval Harnesses, AI-Ready Documentation, Prompt Engineering, AI-Assisted Editorial Review, Anthropic/OpenAI/Gemini APIs, Knowledge Base Design

Cloud & Infrastructure: AWS (ECS, Lambda, S3, API Gateway), GCP, Kubernetes, Helm, Terraform, Docker

CI/CD & Tooling: GitHub Actions, Git/GitHub/GitLab, CircleCI, Python, Golang, Bash

EXPERIENCE

Freelance Technical Writer Aug. 2025 - Present
Literally (agency) *Remote, Oslo, Norway*

- Built AI-assisted documentation workflows using prompt engineering and RAG to identify content gaps and improve consistency in writing, reducing manual review time while maintaining editorial quality.
- Collaborate with engineers, product managers, and stakeholders to ensure accuracy and identify gaps in technical content.
- Tailor tone, structure, and depth for diverse audiences ranging from senior developers to non-technical end users.

Documentation Engineer (Contract) Jul. 2023 - Dec. 2025
Clouddley *Remote, Delaware, USA*

- Reduced customer support tickets by 80% by rebuilding developer documentation and tutorials in GitBook, working with engineers to turn platform features into clear, task-focused guides.
- Built docs-as-code workflows using Git and CI/CD, introducing peer reviews and automated publishing to replace manual documentation releases with merge-triggered deployments.
- Managed the technical blog on Mintlify and maintained a growing tutorial library, making it easier for new users to understand and adopt the platform.

Freelance DevOps Engineer Nov. 2022 - June. 2023
Remote

- Migrated PostgreSQL databases to DigitalOcean Managed Database and authored migration runbooks, ensuring replicability and knowledge transfer across teams.
- Automated CI/CD pipelines using AWS CodeBuild, CodeDeploy, and CodePipeline; documented deployment workflows and infrastructure architecture for cross-team reference.
- Leveraged AWS services (ECS Fargate, DynamoDB, Lambda) to optimize application scalability, creating technical reference documentation for each component.

Junior DevOps/QA Engineer Apr. 2022 - Oct. 2022
Grais *Remote, New York, USA*

- Automated web application packaging and deployment on ECS Fargate using GitHub Actions; maintained internal deployment guides and operational runbooks.
- Orchestrated 3-tier application deployments on AWS (Amplify, Elastic Beanstalk, RDS), implemented CloudWatch monitoring, documented operational procedures and integrated various AWS services to meet business/client needs.

Cloud Engineer Intern Aug. 2021 - Oct. 2021
She Code Africa Cloud Program *Remote, Lagos, Nigeria*

- Containerized web applications with Docker, provisioned GCP infrastructure using Terraform, and scripted CI/CD pipelines with Jenkins and CircleCI.
- Automated infrastructure setup using Ansible; documented provisioning procedures to reduce onboarding time for incoming team members.

OPEN SOURCE

Helm docs (CNCF Graduated) — Contributor Feb. 2026 - Present
Fixed a broken community-update job by adding a drift guard to the CI workflow, authored the plugins v3→v4 migration guide, contributed to the Helm 4 release history, the contributing guide, and the Go SDK docs.

PERSONAL PROJECTS

AI Changelog Generator
A Python CLI tool that reads git commit history and generates polished, categorized changelogs using Gemini's API or Claude's API. Parses commits, filters noise, groups changes by type (Added, Changed, Fixed, Security), and outputs publish-ready Markdown following the Keep a Changelog standard. Includes a --prepend flag for incremental updates and a GitHub Actions workflow for automated release notes.

Runbook as Code (Zensical)
Docs-as-code site of executable AWS incident-response runbooks (ECS, RDS, Lambda, ALB), built with Zensical and deployed to Netlify. Enforced a consistent runbook template via a custom Python structure validator and ShellCheck linting in GitHub Actions CI, with automated deploys and per-PR previews.

EDUCATION

Bachelor of Science in Biochemistry 2016 - 2021
University of Port Harcourt
